WORK PREFERENCES

Looking for a	Full Time Job
Can start working	Immediately
Preferred location	Anywhere in India, Pune

INTERNSHIPS AND PROJECTS

Internships	<p>TechR (Duration 3 Months)</p> <p>I completed my internship in TechR as an android application developer. I worked in a team. The project is for helping peoples in Covid-19. As we all know the corona is contagious and can spread by human contact so, We created an application for delivering groceries in Covid-19. It was basically for shopkeepers and customers, customers will place the order and do the online payment if they want. The order details will be given to the shopkeepers in their area and they can just go to the shop and take their groceries so no need to make a queue or wait in a line in front of the store to take their groceries. It will help to stop the spread of corona. I have done the database work using firebase, UI design, and backend Java programs also. As I have worked in a team so am a good team player also.</p> <p>Skills used - team work, Firebase, Java, Android Studio, Geo-location, Github</p>
-------------	---

Projects

Home Automation system (Duration 6 Months)

IoT based home automation system is for controlling home appliances using android applications. In this, we used Arduino Uno integrated wifi module ESP8266 and external Bluetooth module SC05 for taking inputs from Application. The user will register first and after doing login will select the room ex Bedroom, Hall kitchen, etc., and can control the appliances of that room. Even if the user is not in the home can control the appliances using an android application..

Skills used - Arduino Uno, C, c++, Android Studio

TransChat (Duration 1 Months)

TransChat is chatting plus Translation. It is an android Application using Yandex API for translation of the message in a chat with 22 different languages. The user will select the language in which he or she wants to communicate with others. The message coming from the sender will be converted into that language and the msg which user sends will be converted into that users language. It is for making communication easy for removing language barriers..

Skills used - Android Application Development, Yandex API

WebChat (Duration 2 Months)

Web Chatting application using HTML, CSS, bootstrap, and PHP. Used MySQL database for storing the users data..

Skills used - HTML, css, Bootstrap

SKILLS AND ACHIEVEMENTS

Skills	java, c++, data structures, oop, c, html, css, rdbms, android studio, drawing, painting, Reading, Cooking, Cricket
